

a

Ternary Complex & Proteasomal Trajectory

mechanistic anchors: PMIDs 35649987, 37494883

c

assay	what it reads out	method family	typical stage
TR-FRET Binding	Binary target & ligase affinity	biochemical	preclinical
SPR Ternary Kinetics	Cooperativity & ternary half-life	biochemical	preclinical
HIBIT Ubiquitination	Target ubiquitination rate	flow cytometry	in vitro lead
Capillary Western (Wes)	Quantitative POI degradation	biochemical	in vitro lead
TMT 18-plex Proteomics	Unbiased proteome neo-substrates	proteomics	orthogonal screen
In Vivo PK/PD Modeling	Tumor regression & safety window	in vivo	candidate selection

assay PMIDs: 35649987 · 37494883 · 36474163 · 33288927 · 31792461 · 38101123

b

	preclinical	phase 1	phase 2	phase 3
Bavdegalutamide AR Degrader (ARV-110) Hepatic transaminase elevation; CYP3A4 accumulation			●	
Vepdegestrant ER Degrader (ARV-471) Tolerated benchmark; manageable on-target safety				●
CFT7455 CRBN Molecular Glue High-potency neutropenia via IKZF1/3 degradation		●		
CC-90009 GSPT1 Molecular Glue Hyperbilirubinemia and dose-limiting toxicity		●		
DT2216 BCL-XL Degrader (VHL) Tolerated benchmark; platelet-sparing via VHL tropism		●		
MDM2-PROTAC Stapled Degrader Proteasome-resistant; persistent		●		
	● adverse signal	● no signal	● under-reported	

evidence register: PMIDs 36474163, 33288927, 31792461
